

Abstract

The present invention relates to a remote monitoring method comprises the steps of

- 5 - monitoring an occurrence of an event, providing a signal to a wireless module in response to the occurrence of the event,
- sending a wireless application protocol request being indicative of the occurrence of the event to a first gateway, converting the wireless application protocol request to a first hypertext transfer protocol request, sending of the first hypertext transfer protocol request to a server, determining at least one receiver address for the first hypertext transfer protocol request by the server,
- 10 - sending of a second hypertext transfer protocol request from the server to a second gateway, sending of a wireless application protocol service loading message to the at least one receiver from the gateway.
